Energy efficiency for energy security: industry input to produce energy savings and system efficiency gains across the European Union

5 May 2026

The present document is the contribution of a broad industrial ecosystem to the European Commission's AccelerateEU task to develop a **catalogue of replicable measures to produce energy savings and system efficiency gains** for the EU Energy Ministers that will gather in Cyprus on 13 May 2026.

This updated catalogue presents **cross-sectoral, readily deployable energy efficiency**

technologies and solutions that can strengthen energy security, alongside industry commitment to support the development of concrete action plans for their large-scale implementation.

The catalogue analyses **eight different areas** where energy-efficient technologies can enhance energy security:

- Building's technical systems
- Passive energy efficiency solutions
- Lighting system
- Industrial energy efficiency
- Efficiency, flexibility and decentralisation in the energy system
- Water and energy savings
- High efficiency appliances
- Nature-based solutions for efficiency and resilience

The energy-efficient building industry is committed to supporting the development of concrete action plans for the **large-scale implementation of these technologies**.
